

Ensure reliable production with Parts Control by Tetra Pak.

Securing the right part at the right time can be the difference between smooth operations and expensive downtime. Many food and beverage producers feel they are not in control of their parts and consumables. They either need a part but don't have it, or have a part but don't need it, or can't find it. Inefficient parts management can lead to delays in production, business downtime and increased costs.

To learn about Parts Management, a Product Manager at Tetra Pak, has shared his insights into how Tetra Pak's Electronic Parts Inventory Management System and the ePIMS app can streamline operations along with minimise costs.

Parts management made easy.

At Tetra Pak, we ensure that you have easy access to the right part when you need it. Building on decades of data, we start by assessing your current situation to find the root cause of your problems – be it people, parts, or processes. With these insights, we develop scalable solutions tailored to meet your specific needs. Our solutions cover a range of parts and consumables for all your equipment, independent of brand and at all your plants.

Parts Operational Assessment – Identify improvement areas in your warehouse operations to achieve your strategic objectives with an evaluation of your operational effectiveness.

Parts Control Basic – Streamline management of your warehouse operations with full visibility into stock levels and order parts easily using ePIMS and the ePIMS app.

Parts Control Value – Continuously improve the availability of parts with a customised solution to drive efficiencies in your warehouse operations.

Parts Control Premium – Secure the availability of parts, reduce warehouse operations costs and optimise capital investment with a consignment stock solution.

Start Up Offering – Get part recommendations for the exact configuration of your new Tetra Pak line to secure production during the initial 2 years.

Stay in control with Electronic Parts Inventory Management System (ePIMS).

ePIMS and the ePIMS app optimise the management of parts stock, storage and replenishment. With access to statistics on your smartphone or tablet, you can quickly view stock levels, locate where parts are stored and order directly for quick delivery to any location at any time. With support to control stock levels and plan for future procurement, you can secure maximum uptime with reliable production. It significantly reduces the time spent managing parts and consumables and avoids tying up excess capital in inventory.

Parts management is critical for ensuring a reliable and cost-effective production. Easy and fast access to the right part at the right time minimises production downtime and optimises parts inventory.

Case study

Optimising parts inventory

A juice producer in Mexico was looking to downsize, streamline operations and gain control over its parts inventory. Tetra Pak® conducted an Operational Assessment and determined that a Parts Control Basic Solution was the best fit.

Tetra Pak implemented the complete solution, providing support each step of the way to help the juice producer get up and running and optimise its parts inventory.

With a fast and precise way to handle parts, capital tied up in parts inventory was reduced by 90%, parts turnover increased by 300% and obsolete parts were eliminated from its warehouse.
