

Tetra Pak® Dust Filter FL002

Self-cleaning filter for dust filtration

Application

Tetra Pak® Dust Filter FL002 is specifically designed to ensure volumetric air exchange. As an option, the filter can be equipped with a fan which will allow a wide variety of applications such as mixing, pneumatic conveying and discharging from a hopper over a feeder with an airlock.

The unique compact design allows easy fitting in an existing installation or in a limited space. The filter has a stainless steel body and is suitable for the food industry with high hygiene requirements for powder products such as infant formulas, dairy products, nutritional products and food supplements.

Highlights

- Optimal compact design
- Fast and complete self-cleaning
- Ergonomic design
- High standard of hygiene
- Atex II3D and CE compliance

Working principle

The process air goes through filter media where the dust particles are retained. Purified air goes out through the clean side.

A reverse jet effect is then created to remove dust from the filtering surface. The dust is either collected or sent back into the process. The shape and composition of the filtering media are particularly suitable for a hygienic environment. Cleaning is made easier and the filtering surface is optimized. Furthermore, the cylindrical design of the body prevents powder retention.

Standard scope of supply

1. Stainless steel cylindrical body
2. Stainless steel compressed air tank
3. Filtering medium and framework
4. Solenoid valve
5. Flow valve
6. Fan

Options

- Vacuum fan
- High hygiene filtering media

Consumption data

Dimension and capacities

Type	FL002
Ø, mm	300
A, mm	400
B, mm	760
H1, mm	785
H2, mm	1070
Weight, kg	40
Filtering surface, m ²	0.7

Compressed air

Pressure, bar	3.5
Outflow, m ³ /h	2.4

Fan

Frequency 50 Hz / 60 Hz

Power, kW	0.18
Outflow, m ³ /h	190
