

MAINTAIN OPERATIONS EFFICIENTLY

Optimise your uptime with our Preventive Maintenance offering by taking proactive care of your equipment. Preventive Maintenance is an efficient way to minimise the risk of unplanned stoppages, maximise uptime, reduce the duration of unplanned service stops and save money in the long run. With our Preventive Maintenance solution, you always get the support you need to maintain your operation in the most efficient way.

Your key to minimising downtime

Preventive Maintenance by Tetra Pak®

OUR PREVENTIVE MAINTENANCE OFFERING

With Tetra Pak Preventive Maintenance, we utilise our Tetra Pak Maintenance system (TPMS) to identify the right recommendation at the right interval, based on input from your equipment, global data and best practises. In combination with our highly skilled service engineers, this offering is a comprehensive and proactive maintenance solution.

From planning and pre-inspection to post-service validation, we provide what you need to ensure the best possible service outcome. The result is fewer unplanned stops and expenses, which lead to lower operational costs, and peace of mind.

BENEFITS

Minimise planned and unplanned downtime

Predict equipment performance over time

Reduce cost and effort of people management

Access to the right competence, when you need it

CASE

A Europe-based dairy cooperative was facing tough competition and increasing pressure on costs. They wanted to find a maintenance solution that would help them reduce their annual maintenance cost at one of their sites.

By developing a tailor-made maintenance solution with an overview of coming service events in the annual maintenance plan, the customer was able to implement predictable cost planning and simplify administration. The new maintenance contract helped them reduce costs and improve mechanical performance. Maintenance costs went down 45% whilst spare parts consumption was reduced with 8%. Overall line machine mechanical efficiency (LMME) was above 96%.

WITH PREVENTIVE MAINTENANCE, YOU CAN ACHIEVE UP TO 40% COST REDUCTION COMPARED TO NOT DOING MAINTENANCE PROACTIVELY
