Flower power chocolate drink - Sunflower choco beverage

Omega-3 sunflower oat beverage

Fruit boost drink - Juice with milk and postbiotics

Exotic energy drink with postbiotics

Oat iced espresso

Fava Frozen Dessert

- sustainable, tasty, indulgent, generous

Let's partner to change

Its all about taste

To make ice cream is easy. To make a plant-based frozen desserts is challenging. Overcoming extensive challenges by extruding, making it formstable and continuously performing needs knowledge and the right equipment. Making it taste good? Then you need fava beans.

When we ask consumers like flexitarians or consumers considering to change to more vegan plant-based options then first focus is taste – then appearance and mouthfeel. All this the fava frozen dessert checks off.

We have the solution, you have the market

The concept is validated by several trials at our Product Development Center in Aarhus, Denmark. This we do to assure the tase, quality and production performance and make it a plug and play solution.

You know your market and capabilities.

So, what are you waiting for?

High protein ambient yoghurt w. postbiotics

- flexibility and premiumization

The best from two worlds

High protein

High protein is a mega trend but is not given to be easy. This demands expertise in processing and new ingredients to accomplish a product which is tasty, smooth and delightful.

Making traditional high protein yoghurt is not an issue. But what if you want to heat-treat it, fill it asceptic and store it ambient? Then you are in a whole different ball game of ingredients. We have done the work and

partnered with world class dairy ingredient producers and developed a yoghurt concept which is high in protein and can be stored ambient.

Asceptic, yes. But as yoghurt?

A traditional yoghurt has approx. 20-25 days of shelflife and must be stored cold. This challenges the supply chain and risks that the product will be spoiled over time. Therefor we have a best practice line to overcome this. We secure the right product quality and product characteristics every time.

This extends your distribution range and allows you to enter new geographical markets!

| Nutrition Facts | 100 ml |
|----------------------|--------|
| Calories | 100 |
| Total Fat | 3.4g |

Protein tea with postbiotics

- differentiate your traditional hydration drinks with clear proteins and immune supporting yeast

Tea, protein and postbiotics

Protein source matters

If you want to add whey proteins to tea? Then you would get a cloudy product with a taste of milk. But what if you add a super hydrolyzed and functionalized whey protein isolate? Then you will get a protein enriched tea 100% clear with no effect on taste and proteins that contribute to the growth of muscle mass.

Consumer demand for functional fortified drinks, flavoured waters, vitamin waters, ice teas and protein RTDs (ready-to-drink beverages) is on the rise. Functional, pleasant-tasting and with nutritional benefits.

Postbiotics -

- are the next generation of ingredients to fortify drinks with a unique way to differentiate products from the market.

Postbiotics are tyndallized microorganisms that still has active compounds on which you can claim health benefits like immunity – or – claim the strain of the microorganism like saccharomyces boulardii on the front of the package.

Flower power chocolate drink

- affordable, nutritious and sustainable has never been easier

Sunflowers: A powerful source of protein

Nutritional value

Plant-based beverages can be lacking <u>protein</u> and can have as low as 0.0% protein like rice beverages. From the traditional drinks, soy has a protein level of 3.7% like milk. <u>Fat</u> is not the issue as plants are normally low in fat and can easily be fortified with healthy oils. <u>Carbohydrates</u> and sugars can be high because of hydrolyzation of starches.

Proteins has not been highly used before. With today's consumer focus, the demand is rising for more nutritional and healthier products. We are in the starting phase to see producers launching protein fortified plant-based drinks. Some even go as far as tailor-making a product to mimic milk on fat, carbohydrates and protein.

Affordability must go hand in hand with healthy

Sunflower protein are rich in vitamins, many minerals and essential amino acids. Not only is it nutritious, it also a highly upcycled product which makes it even more sustainable. But even better? Its affordable - similar or more than half the price of dairy and plant-based powders.

Exotic energy drink with postbiotics

- not all energy drinks need to be carbonated

Energy BOOST and GUT health

Simple but premium product

There is an increasingly competitive landscape Functional drinks are driven by busy consumers seeking shortcuts to enhanced health, primarily by younger adults and parents.

As consumers are learning more about functional ingredients and products for health, they're becoming more aware of irresponsible marketing and thus skeptical of some claims. Brands are leveraging on transparency and scientifically substantiated functional ingredients.

Here the concept is simple: Juice, taurine, postbiotics and sugars.

Claims: Support your metabolism Support your immune system

% of JN & FFSD launches featuring the following functional claims, Nov 2017-Nov 2019

Nov 2019 - Oct 2020

| Nutrition Facts | 100 ml |

Oat iced espresso

- sweet and soft with hints of vanilla

Oat iced espresso

Delightful and creamy - on the go

Why does taste mater? Everything we consume we evaluate. From appearance to mouthfeel - but most important is taste. This is rated highest by consumers and is the biggest contributor to turning back to the product.

Therefor combining the right raw materials are essential. Coffee in a rice beverage might not sound appealing and mixing oat with strawberry flavours is not a fit.

However, mixing cold brew coffee with an oat beverage you get one of the most delightful creamy products. The sweetness and nutty flavour from the oats combined with the balance of flavours where sweet, bitter and acidic notes all work pleasantly together from the coffee

It just combines perfect! So, what are you waiting for?

Predicting the future development

Coffee consumption is on the rise and trendy amongst millennials. The coffee market size worth USD 112.8 billion by 2030 at 5.12% CAGR. Oat is still booming and expected to reach a market size of USD 5.37 Billion in 2029 with CAGR (2023 - 2029)13.57 %.
